

Hapus Scout

Orchard inspection support for Alphonso mango teams

The problem we are testing

Workers need a consistent way to report suspicious leaf or fruit symptoms.
Managers need enough evidence to decide what to inspect.

The working journey

1. Capture a photo and worker note
2. AI observes and asks questions
3. Manager reviews the inspection brief

Existing model weights and saved cases in Google Drive

Next: agronomist evaluation, Marathi / voice usability, team permissions

Problem hypothesis; impact unmeasured. Inspection support, not confirmed diagnosis.
Assumes internet and an active GPU session. Live model acceptance pending.
