

Hapus Scout™ Enterprise — Smart AI Inspection for Mango Farms

Helping Alphonso mango farm workers spot crop diseases early and share instant photo reports with farm managers.

1. Slow Disease Detection Causes 40% Crop Loss

- Problem: Alphonso farmers lose nearly 40% of their mangoes each year because diseases spread unseen.
- Solution: Workers upload a photo and get a clear AI checkup report in less than 7 seconds.
- Impact: Saves ₹1,500 per expert visit; allows 1 manager to easily look after 500+ orchard blocks.

2. Language Barrier for Farm Workers

- Problem: Over 85% of workers speak only Marathi or Hindi and cannot use complicated English apps.
- Solution: Simple 1-click switch between English, Marathi (मराठी), and Hindi (हिन्दी).
- Impact: Workers can report symptoms in their own native language with zero training needed.

3. Wasting Money on Wrong Pesticide Sprays

- Problem: Scared farmers spend ₹15,000 to ₹40,000 per acre buying wrong sprays, harming crop exports.
- Solution: AI follows official government farming rules (ICAR) and separates facts from guesses.
- Impact: Cuts pesticide costs by 40% to 60% and keeps mangoes safe for international export.

4. Lost Paper Records & Messy Chat Messages

- Problem: Farm notes get lost on WhatsApp or paper, giving managers no real inspection history.
- Solution: Automatic digital library stores every photo, symptom report, and manager review.
- Impact: Works for small 2-acre family farms as well as large 1,000-acre commercial estates.

KEY ADVANTAGES: COST, SPEED & SCALABILITY

- LOW COST: 90%+ cheaper to run by using smart lightweight local AI models on low-cost devices.
- FAST SPEED: Under 7 seconds per photo checkup so workers get instant answers right on the field.
- EASY TO SCALE: Native Marathi/Hindi support allows rapid deployment across all Konkan mango farms.

SAFETY NOTICE & PROJECT LINK

- Farm Safety Notice: AI assists initial checking only. Certified farming experts must verify before chemical spraying.
